AMENDMENT

Please amend the claims as follows:

- 27. (Four times amended) A porous free-flowing fungal [extrudate] granulate formed by extrusion which consists essentially of intact dead [fungi] microorganisms or dead [fungal] microbial cells obtained by mechanical extrusion of a [fungal] microbial biomass, the [extrudate] granulate having a structure that allows a solvent access, via the pores, to the intact dead cells [in order] to isolate or extract a [desired] compound therefrom.
- 28. (Four times amended) A composition [comprising] consisting essentially of granular particles of intact dead [fungal] microbial cells from a biomass which particles
 - (a) are obtained by granulating the biomass having a dry matter content of 25 to 80%;
 - (b) have a dry matter content of at least 30% but less than 70%; and
- (c) have a structure that on drying allows isolation or extraction of a desired compound from the intact dead cells with a solvent through pores and/or channels.
- 30. (Four times amended) a composition which comprises dried porous granules consisting essentially of dead [fungal] microbial cells, the dried granules being obtained by drying granular particles, themselves obtained by granulating a microbial biomass, said resultant dried granules having a dry matter content of at least 80% and a structure that allows, via the pores, solvent access [of a solvent] to a compound contained within the intact dead cells to isolate or extract the [a desired] compound therefrom

Please add the following claims:

--37.

The granulate according to 27 wherein the microorganism is a fungus.

on tu-38.

The granulate according to claim 31 wherein the fungus belongs to the order

Mucorales.

The granulate according to claim 38 wherein the fungus belongs to the genus Mortierella.

The granulate according to claim 29 wherein the fungus is Mortierella alpina.

The granulate according to claim 27 wherein the compound is a polyunsaturated fatty acid (PUFA), optionally contained in a lipid.

The granulate according to claim 41 wherein the polyunsaturated fatty acid is a C18, C20 or C22 ω-3- or a C18, C20 or C22 ω-6-polyunsaturated fatty acid.

H6

A3. The granulate according to claim A2 wherein the polyunsaturated fatty acid is a C20 or C22 ω-3- or a C20 or C22 ω-6-polyunsaturated fatty acid.

The granulate according to claim 42 wherein the compound is arachidonic acid (ARA), eicosapentaenoic acid (EPA) and/or docosahexaenoic acid (DHA).

The granulate according to claim 37 wherein the fungus belongs to the genus Phycomyces, Blakeslea or Aspergillus.

The granulate according to claim 27 wherein the microorganism is a yeast.

The granulate according to claim 27 wherein the compound is tetra-acetyl-phytosphingosine (TAPS).

The granulate according to claim 27 wherein the microorganism is a bacterium.

The granulate according to claim 27 wherein the compound is a vitamin.--

49.
